### INSTRUCTIONS

All surfaces must be clean, dry and contamination-free before painting.

#### SURFACE PREPARATION

SUBSTRATE(S) :	RECOMMENDED
STEEL	The surface must be clean, dry and treated with a compatible anti-corrosive system. See the section pertaining to compatibilities or consult our technical department.
CONCRETE	The substrate must be at least 28 days old, clean, dry and sound, free from any pollution and capillary moisture, treated with a compatible system. See the section pertaining to compatibilities or consult our technical department.

#### APPLICATION CONDITIONS

MIXING	The product is supplied in pre-measured kit form. Pour the hardener part into the base tub and mix, taking care not to incorporate air. The mixing temperature should be at least 10°C. If not, it is necessary to add thinner to get the application viscosity. N.B. excess thinner increases the risk of sagging.		
INDUCTION TIME	15 mn		
WEATHER CONDITIONS	Room temperature Relative humidity	: :	The temperature should be between -5°C and 40°C 85% maximum
TEMPERATURE	Of substrate Of product	: :	Between and -5°C and +40°C and at least 3°C higher than the dew point in order to eliminate any risk of condensation.
TECHNICAL NOTE	Do not leave paint in spray equipment for longer than the pot life. Rinse equipment with 61-161 v01 thinner then clean it carefully with cleaning solvent. Prepared mix that is not used should not be sealed hermetically. For an extended stop, it is better to prepare a new kit.		

Early exposure to condensation or rain could provide a change of gloss and/or shade.
